START WITH THE PROBLEM, NOT THE TECH

Before implementing AI solutions, legal teams need to clearly define the issue they're trying to solve and assess whether to build, buy, or adapt a solution accordingly. Don't implement tech for tech's sake.

AI DILEMMAS AREN'T NEW – JUST MORE VISIBLE

Ethical and legal questions raised by AI echo challenges we've already seen with technology-assisted review (TAR) and machine learning over the past decade. The frameworks exist – now they need refinement.

PERCEPTION OUTPACES UNDERSTANDING

This is one of the first times the general public feels familiar with a legal technology before the profession itself fully understands it. The gap between perception and reality poses unique risks. Issues such as authenticity (resumes, documents) and attribution will only grow.

AI-GENERATED CONTENT CHALLENGES AUTHENTICITY

Legal teams must consider how to verify the authenticity of documents (and in our case, resumes). As generative AI becomes more common, knowing what's human versus machine becomes a legal issue.

RECOGNITION AND ATTRIBUTION ARE NEW RISK AREAS

Who produced it? What was used to produce it? Can we trust it? These are the new due diligence questions in legal workflows where AI-generated material may appear with clear attribution.

HOW ELEVATE CAN HELP YOU

- Build a World Class Team
- Take Your Career to the Next Level
- Better Contracting
- Sustainable Savings
- Modern Legal Services
- Useful Legal Software
- Bring Your Vision to Life
